

# SensIT USB Software

## Made To Measure

Since 1988 FUTEK has been making a name in the Sensor Industry as a Solution Source. We're always challenging conventional ways to make sure our customers find the best solutions. As FUTEK Engineers began working on our USB Solution, we understood how critical it would be to provide a reliable Software Solution to go hand in hand with our USB Technology. FUTEK offers a free SensIT USB Software with the purchase of each USB Kit or Sensor product that has integrated our proprietary USB Technology.

## SensIT: Standard

FUTEK currently offers our standard SensIT USB Software with the purchase of each USB Kit. With the standard SensIT USB Software version you are able to read live measurements as the sensor is being used. Options such as Peak, Valley, Tare and Gross are all available on this platform. You can download this free version and test the software environment.

## SensIT: Pro

FUTEK also offers our SensIT USB Software Pro version for those looking for advanced features. Designed around the same simple interface as our standard version SensIT Pro offers features such as data logging and live graphing and measurement of 16 channels.

## Comparison of Standard vs Pro

Software Features	SensIT Standard	SensIT Pro
<b>Display Mode</b>		
Numbers of Channels	1	16
